

ELECTROHUB

Sales & Profit Performance Analysis

Power BI Business Intelligence Project Report

PROJECT DOMAIN	Sales Analytics • Business Intelligence • Data Visualization
PRIMARY TOOL	Microsoft Power BI
ANALYSIS FOCUS	Sales, Profit, Net Sales, Quantity Sold, Discounts, Products, Cities, Promotions & Time Trends
REPORT PURPOSE	Convert transactional sales data into actionable business insights for performance monitoring and decision-making.

PROCEDURE / ANALYTICAL WORKFLOW

1. Understand the business requirements → 2. Prepare and organize the transaction data → 3. Apply filters and analytical calculations → 4. Build KPI and comparative visuals → 5. Analyze product, city, promotion and time performance → 6. Interpret patterns → 7. Translate findings into business recommendations.

Prepared from the supplied ElectroHub dashboard screenshots and project requirements.

1. Executive Summary

The ElectroHub Sales Analysis project is a Power BI dashboard designed to evaluate sales and profit performance across products, cities, promotions and time periods. The dashboard combines high-level KPIs with detailed visual analysis and an order-level data view, allowing users to move from overall performance to transaction-level investigation.

3,510 Total Orders	122M Total Sales	12.2M Total Profit	7.1K Quantity Sold
------------------------------	----------------------------	------------------------------	------------------------------

Business questions addressed

- Which products are the strongest and weakest by sales, profit and units sold?
- How does sales performance change over daily, monthly, quarterly and annual periods?
- What relationship exists between profit and net sales?
- How do sales, profit and quantity compare between two user-selected periods?
- Which promotion categories show higher average discount levels?
- How many orders are recorded, and what does the order-level data show?
- How are sales distributed across different cities?

2. Data Analysis Procedure

Stage	What was analyzed
Requirement mapping	Mapped the dashboard to product, time, profitability, promotion, order and city analysis requirements.
Data preparation	Used the order-level fields visible in the supplied data view, including date, discount, net sales, price, product, profit, promotion and units sold.
Exploratory analysis	Compared products, cities, promotion categories and time periods using Power BI visuals.
KPI analysis	Reviewed total orders, sales, profit and quantity sold.
Comparative analysis	Used two date filters to compare selected periods across sales, profit and quantity.
Insight generation	Identified high-performing products, lower-performing products and promotional patterns.
Recommendation	Converted observed patterns into practical actions for product focus, promotions and monitoring.

Order-level fields visible in the supplied dashboard include Customer ID, Order ID, Date, Discount, Discount Percentage, Net Sales, Price Per Unit, Product ID, Profit, Promotion ID, Total Sales and Units Sold.

3. Dashboard Overview & Visual Analysis

Dashboard view: city sales, total orders, average discount by promotion category, profit vs net sales and sales trend by period.

Key observations

- The dashboard provides a compact management view combining geographic, promotional, profitability and time-series analysis.
- The Profit vs Net Sales visual shows a strong positive relationship across the plotted observations.
- The sales trend contains repeated peaks and lower-volume periods, making time-based monitoring useful for planning.
- The city map supports geographic comparison and identification of locations requiring deeper investigation.

4. Product Performance Analysis

Product performance page: Top/Bottom 5 products by Sales, Units Sold and Profit.

Top performers

- Apple iPhone 14 is the leading product across the displayed sales and profit rankings and also appears first in units sold.
- Apple MacBook Air, Sony Bravia 55" TV, Samsung Galaxy S21 and HP Pavilion Laptop form the remaining top-sales group shown.

Lower performers

- Tupperware Lunch Box, L'Oréal Shampoo, Nivea Body Lotion, Dove Soap Pack and Colgate Toothpaste appear in the displayed bottom-sales and bottom-profit rankings.
- The bottom-units view differs slightly, showing that low sales value and low unit volume are not necessarily identical problems.

Interpretation

The product ranking suggests a clear opportunity to protect availability and visibility of high-value electronics while reviewing pricing, promotion, placement and assortment strategy for weaker products.

5. Promotion, City & Time Analysis

The first dashboard page combines city sales, promotion discount levels and sales trend.

Promotion / discount analysis

- Weekend Flash Sale has the highest displayed average discount, followed by Clearance Sale and Summer Sale.
- New Year Special shows a smaller average discount, while Festive Diwali is displayed at approximately zero in the supplied visual.

Time-series analysis

- Sales are displayed from 2020 through 2024, with noticeable peaks across the period.
- The trend can be used for identifying high-demand windows, planning campaigns and monitoring unusual changes.

City analysis

- The map provides a geographic view of sales across Indian cities and can support location-level performance comparisons.

6. Period Comparison Analysis

Two date-filter comparison view for Sales, Profit and Quantity Sold.

The comparison dashboard is designed to let users select two date ranges and compare three core measures: total sales, total profit and total quantity sold.

- The supplied example shows approximately 122M in sales for both displayed periods.
- The supplied example shows approximately 12.2M in profit for both displayed periods.
- The supplied example shows approximately 7.1K units sold for both displayed periods.

Recommendation for use

For management review, use matched periods such as month-vs-month, quarter-vs-quarter or year-vs-year. A matched-period approach reduces misleading conclusions caused by unequal date ranges.

7. Order-Level Data & Filtering

Order-Level Data & Filtering											
Date			Customer Name			Product Name			Promotion Name		
All			All			All			All		
CustomerID	Order ID	Date (dd/mm/yyyy)	Discount	Discount Percentage	Net Sales	Price Per Unit (INR)	Product ID	Profit	PromotionID	Total Sales	Units Sold

Order-level data table with filters for Date, Customer Name, Product Name and Promotion Name.

The detailed view supports drill-down from dashboard summaries to individual transaction records. The supplied table exposes fields such as Order ID, Date, Discount, Net Sales, Price Per Unit, Product ID, Profit, Promotion ID, Total Sales and Units Sold.

Practical uses

- Validate unusual sales or profit values at transaction level.
- Investigate products or promotions contributing to a particular result.
- Filter by date, customer, product and promotion to isolate relevant records.
- Use detailed records as evidence before taking corrective business action.

8. Key Business Insights

Area	Insight	Business meaning
Products	A small group of products dominates the displayed sales and profit rankings.	Prioritize availability, visibility and retention of high-value products.
Low performers	Several products repeatedly appear in bottom sales/profit rankings.	Review demand, pricing, promotion, placement and assortment.
Promotions	Weekend Flash Sale shows the highest displayed average discount.	Measure whether higher discount translates into incremental profitable sales.
Profitability	Profit rises strongly with net sales in the displayed scatter plot.	Sales growth should be evaluated alongside margin/profit quality.
Time	Sales show recurring peaks and low-volume periods across 2020–2024.	Use historical patterns for inventory and campaign planning.
Geography	Sales are distributed across multiple cities.	Compare locations to identify strong markets and improvement opportunities.

9. Recommendations & Action Plan

1. Protect top-product availability

Maintain adequate stock and visibility for the leading products, especially the products appearing consistently in top sales and profit rankings.

2. Review low-performing products

Investigate demand, pricing, product placement, promotion effectiveness and assortment before increasing inventory or discounting.

3. Optimize discount strategy

Do not judge promotions only by discount size. Compare incremental sales and profit to determine whether a promotion is creating profitable growth.

4. Use matched-period comparisons

Adopt month-over-month, quarter-over-quarter and year-over-year comparisons with consistent date windows.

5. Strengthen city-level decisions

Rank cities by sales and profit and identify locations with strong sales but weaker profit for targeted review.

6. Monitor profitability with sales

Track net sales and profit together so revenue growth does not hide margin pressure.

7. Add automated KPI alerts

Set thresholds for sudden sales drops, profit declines, unusually high discounts and low-performing products.

8. Build a recurring management review

Use the dashboard as a monthly/quarterly review tool for product, promotion, geography and trend decisions.

10. Conclusion

The ElectroHub Sales & Profit Performance Analysis dashboard provides a practical business intelligence layer over transactional sales data. It connects overall KPIs with product rankings, promotion discounts, city performance, time trends, profitability relationships, period comparisons and transaction-level details. This structure makes the dashboard useful not only for reporting what happened, but also for identifying where management attention should be directed.

Overall project value

- Transforms raw transaction records into decision-ready visuals.
- Supports both high-level monitoring and detailed investigation.
- Makes product, promotion, city and time performance easier to compare.
- Provides a foundation for recurring sales and profitability reviews.

Suggested next enhancement

Add profit margin %, year-over-year growth %, promotion ROI, city-wise profit ranking and automated exception indicators.

THANK YOU!

Thank you for reviewing the ElectroHub Sales & Profit Performance Analysis.
